Publishers of over 5000 old gun catalogs and firearms books

PO Box 214

Brighton, MI 48114

810-225-3075

Note: Some documents are pdf files in landscape format. They are meant to be printed both sides (duplexed) then assembled and folded in the center to be read as a pamphlet.
FOREWORD

To 1987 Edition: The purpose of this document is to remove much of the mythology surrounding the names found on breechloading shotguns sold in the United States from about 1865 to about 1940. While I am certain that this list is far from complete; I hope that it will serve as a springboard for further study and research into the field of shotgun manufacture and distribution during this period. I am always interested in any markings on shotguns and to this end I hope readers will send along information on any shotgun they might see or possess.

To 1990 Edition: Truer words were never spoken! Since the publication of the first edition of this book, I have acquired several hundred new marks as well as identifying some marks that were previously unknown.

To 1994 Edition: I never cease to be amazed at just how many names there are! Dozens more have been added since 1990 and they still are coming in at the rate of about 10-20 per year. I think that this will be a never ending task, but I love it.

To 1997 Edition: Who would have thought that in just 3 years I would have uncovered yet about 200 more trade names. When I started this list in 1987 I thought I was probably half way there; now I think I am about 20% complete. KEEP THOSE NAMES COMING!

To 1998 Edition: Have added or revised about 100 more listings. Note that this edition has fewer pages (but more listings!) than the previous editions. This is due to the spacing between the entries being deleted; an unfortunate necessity as the cost of printing has risen about 20% since the 1997 edition.
